

Mix, Mash, and Map: Geo-Everything Meets Web 2.0

Instructor: Michael Howser

INTD 1820.024: In today's connected world of mobile devices one key element is driving future development, location, location, location. Driving to unfamiliar locations is now easy thanks to portable navigation systems, when taking a photo can include location information, explore data via Google Earth and Google Maps, and even create customized map mash-ups to share with your friends. This seminar will provide hands-on exploration of how to embrace a "geo-everything" mindset while also considering the implications of everything being location related.

Tuesday, 11-11:50
Homer Babbidge Library Class of '47 Room
